

March 2019

Bryte Insurance is the premier, proactive business risk specialist. Our core purpose is to protect our customers' business.

Bryte's Risk Engineering team offers technical research and consulting to customers, helping them to proactively manage their risks. If your customer is thinking of relocating, expanding, modifying or building, our Risk Engineers are able to consult on the implications to the risk profile and, in some cases, offer alternative solutions.

Bryte Risk Engineering prides itself on having technical and research resources within its structure to seek and offer feasible alternative risk solutions where needed.

We are leaders in seeking out alternative solutions for water stressed areas.

Our passion drives our approach of thinking out of the box.

We try to avoid any elements of surprise. Where the size or complexity of the risk warrants it, our Risk Engineering team will gladly visit and offer an opinion, together with any critical risk improvement requirements, to the broker. Where this business is placed with us, we will cover the cost of the visit.

Our Risk Engineering team also presents risk related training to customers, brokers and the insurance industry. We have presented courses at the IISA, on behalf of brokers and for customers, and continue to evolve our material in pursuit of our goal to help our customers and brokers approach risk with purpose.

Risk Engineering carries out benchmarking and, in 2019, will roll out the first Bryte Risk Grading Awards to selected customers in the commercial and manufacturing sectors.

Risk Engineering – there to partner with brokers and customers, to pursue sustainability and ensure livelihoods.
